

ERANID-IDPSO- Illicit Drug Policies and Social Outcomes

Indicators and new indicators for evaluation of drug policy

Knowledge building and societal dissemination related to partner Co-PI 2

(WP6)

During the course of the project, preliminary results were presented at various international conferences, the summary of which is given in Table 1. Other collaborations interactions took place with EMCDDA on indicators, in particular supply indicators. EMCDDA also intervened, remotely, at the final conference of the project related to Co-PI 2. Other interesting and useful interactions took place following the participation in the meeting day with discussion in Brussels in the framework of the European action plan on drugs: Cooperation and Collaboration for the Reduction of Demand and Supply. Given the low number (24) of participants, discussions and lasting interactions arose.

Table 1. International meetings

Conference	Place and date	Contribution 1	Additional contributions
Addiction 2017	Lisbon, 24-26 October 2017	Presentation: The cost of drug related incarceration in Europe. By Di Censi, Fabi and Rossi	Presentation: High-Risk Drug Use among minors in Italy: trends of available "administrative" data. Rossi Presentation: Drug Policy evaluation. Rossi
ISSDP 13th	Paris, 22-24 May 2019	Poster: Illicit Drug Policies and social Outcomes: cross country analyses. MIPA	Presentation from another project. Rossi
Addiction 2019	Lisbon, 24-26 October 2017	Poster: Preliminary methodological analysis on lexicometric assessment of laws and drug policies and evaluation of social outcomes in Italy. De Marinis, Fabi, Lanzoni	Presentation: Application of a preliminary 'qualitative' lexicometric approach via an example: anti-drug laws, policies and

		and Rossi	social outcomes in Italy since 2000. De Marinis, Fabi, Lanzoni, Manno, Minelli and Rossi
CND meeting and side events	Vienna 2-6 March 2020	Participated actively in many side events also organized by Italians such as, for example, San Patrignano and Villa Maraini.	Also participated in small unofficial meetings with EMCDDA and UNODC researchers on supply-related indicators and, in particular, on market estimates with the Director of EMCDDA.

At national level, inter-institutional collaborations have taken place with all data sources of interest Agencies and have allowed the acquisition of all data necessary for the analysis of WP4 and WP5, detailed in Annex 2 and Annex 3 of the national report. In addition, a protocol was established with the Higher Institute of Health (Ministry of Health), which allowed for in-depth analysis of the data relating to the General Register of Mortality and SDO (hospital discharge), presented at the final conference of Co-PI 2 in Italy, which make it possible to plan scientific work and international publications. Other interactions at the national level with operators and organizations involved in assistance and harm reduction such as, just to give an example, Parsec, Villa Maraini, San Patrignano, CNCA, and Gruppo Abele.

A website, dedicated to the communication of the project's results, has also been set up, where the final conference, held online on 18 June 2020, was announced. The conference can always be followed online (<https://www.radioradicale.it/scheda/606958/evidenze-scientifiche-delle-leggi-e-delle-politiche-antidroga-in-italia>). Subsequently, the conference was also repeated on 22 June at 12 noon on Facebook at the Luca Coscioni Institute.

After the conclusion of the project, also the national final report, complete with attachments and appendices, will be included in the website and scientific works will be submitted to international journals with referees.
